Who We Are

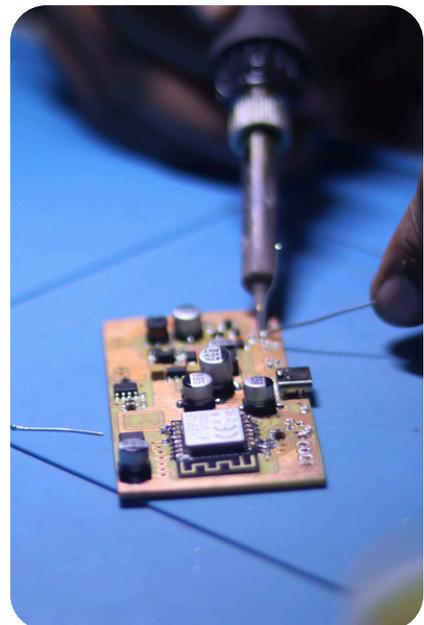

Yarsa Tech is Nepal's pioneering electronics manufacturer, created to address the gap between design and local production. Rather than importing ready-made units, we engineer and build electronics from scratch, bringing R&D, industrial product design, PCB fabrication, SMT assembly, and mass production together in one facility.

Manufacturing Electronics in Nepal

Yarsa Tech challenges the old notion that Nepal can't make electronics by proving with real products that Nepal can design and build hardware that stands up to global expectations.

Our team blends practical engineering with disciplined execution delivering products that are reliable, efficient, and globally competitive.

What We Do

At Yarsa Tech, we handle the entire hardware journey, from concept to finished product, with an integrated, end-to-end workflow that eliminates friction, rework, and needless handoffs.

Our Capabilities & Workflow

✔ Electronics R&D & Engineering

We drive concept development, schematic and PCB design, and embedded firmware delivering complete electronics engineering grounded in real-world performance.

✔ PCB Fabrication & Assembly

With in-house PCB manufacturing and industrial SMT assembly lines under rigorous quality control, we keep production tight, traceable, and reliable.

✔ Product Design & Prototyping

Our mechanical designers and prototyping labs (3D printing – FDM & SLA, CNC) turn ideas into working hardware fast, enabling rapid refinement and iteration.

Our Capabilities & Workflow

✔ Mass Manufacturing

We scale products from prototype to volume with industrial injection molding and optimized PCBA production workflows built for consistency and cost efficiency.

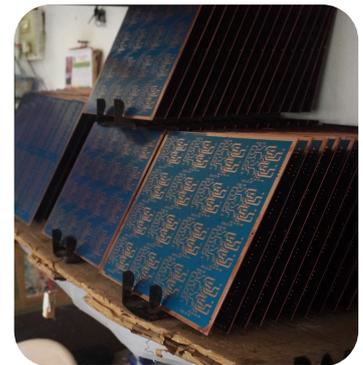

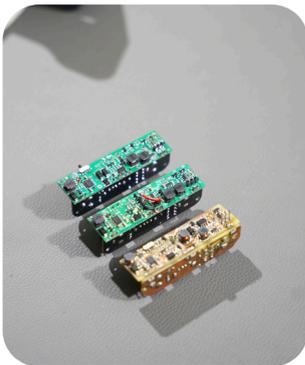

✔ Packaging & Branding

We design packaging and enclosures that are not only durable but crafted to enhance the user experience and strengthen brand impact.

This fully integrated workflow ensures continuity from idea to launch. No delays, no disconnects, just products engineered and built right here.

Products – Built with Purpose

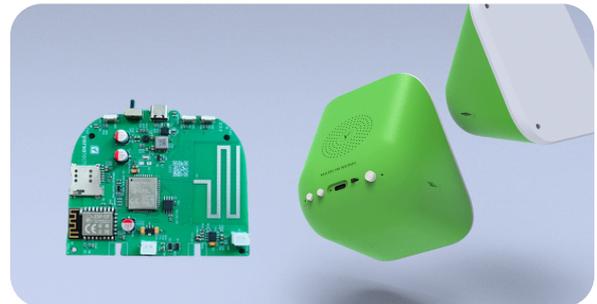

Yarsa Tech develops and manufactures electronics under its own consumer brand **Nizi**, while also building products for partner brands.

nizi Genuine
Electronics

Nizi Product Line:

Nizi Power – Portable power backup engineered for Nepali electrical conditions for uninterrupted operation of routers and devices.

AudiQR – Audio Payment Notifier Merchant-oriented device providing reliable QR payment alerts and easy onboarding.

Nizi Scan – Robust barcode and QR scanner designed for accuracy and ease of use.

Dynamic QR Display – Intelligent realtime payment display with merchant feedback.

School Attendance Devices

NFC-enabled smart attendance and transportation tracking systems with check-ins and real-time reports.

Kids Interactive Toys

Button-activated educational toys with built-in speaker that plays stories and rhymes for engagement and learning.

FoneTAG – A contactless payment terminal for offline payment using NFC, CPQR, and dynamic QR.

Surge Protector – 5 point surge protector to safeguard multiple devices against voltage spikes.

Why Yarsa Tech?

Made Locally, Engineered Globally

Our products are not rebranded imports. They are engineered here, with manufacturing pipelines built to meet standards.

Complete Hardware Production

From electrical concept to finished product, we own the process — reducing risk, improving quality, and shortening time to market.

Proven Innovation

Winner of the **inDrive Startup ICT Award 2023**, recognized for advancing innovation and technology.

Growth & Global Reach

We are expanding beyond Nepal, with products reaching international markets and broader use cases.

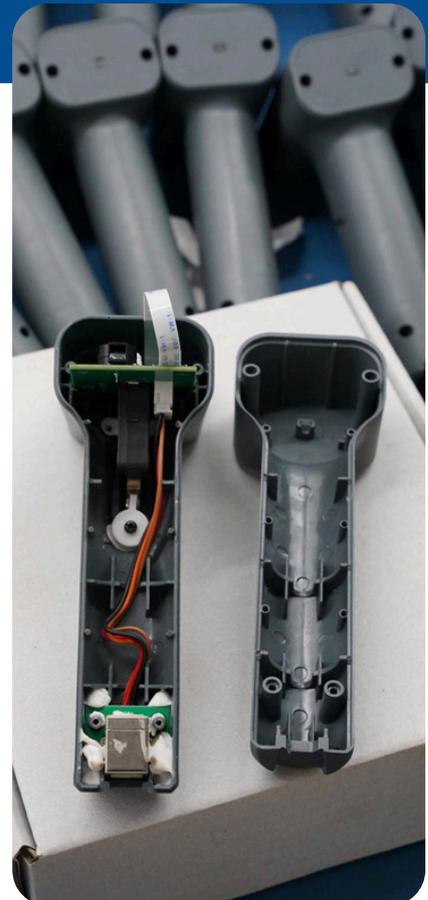

We build electronics that genuinely solve real problems with solid engineering, delivering reliable performance and backed by a 1-year replacement guarantee and dependable support.

Let's Build the Future of Electronics — Together

We are engineering the next generation of electronics. Made here, crafted honestly, and built to last.

This is **Yarsa Tech**.
